How to use Tirvox Single Dose Pre-Filled Pen Autoinjector?

Step (1) : Check the Pen Before Using

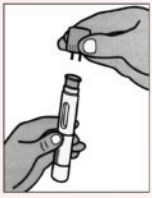

1. Hold the Pen in up-right position.
2. Make sure the pen is not damaged and locked properly.
3. Make sure from the pen window that the medicine.
   * is not frozen
   * is not cloudy
   * does not have particles

Step (2) : Choose your Injection Site

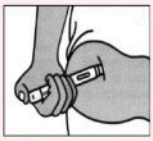

1. Tirvox can be injected under the skin of stomach area (abdomen), thighs or with the help of someone else at the back of upper arm (as shown in images).
2. Choose a different injection site for each new injection atleast 1-inch from the last area you injected.

Step (3) : Instructions to Use Pen

1. Remove the pen cap.
2. The needle is hidden, be careful not to push down on the needle cover to avoid needle stick injuries.

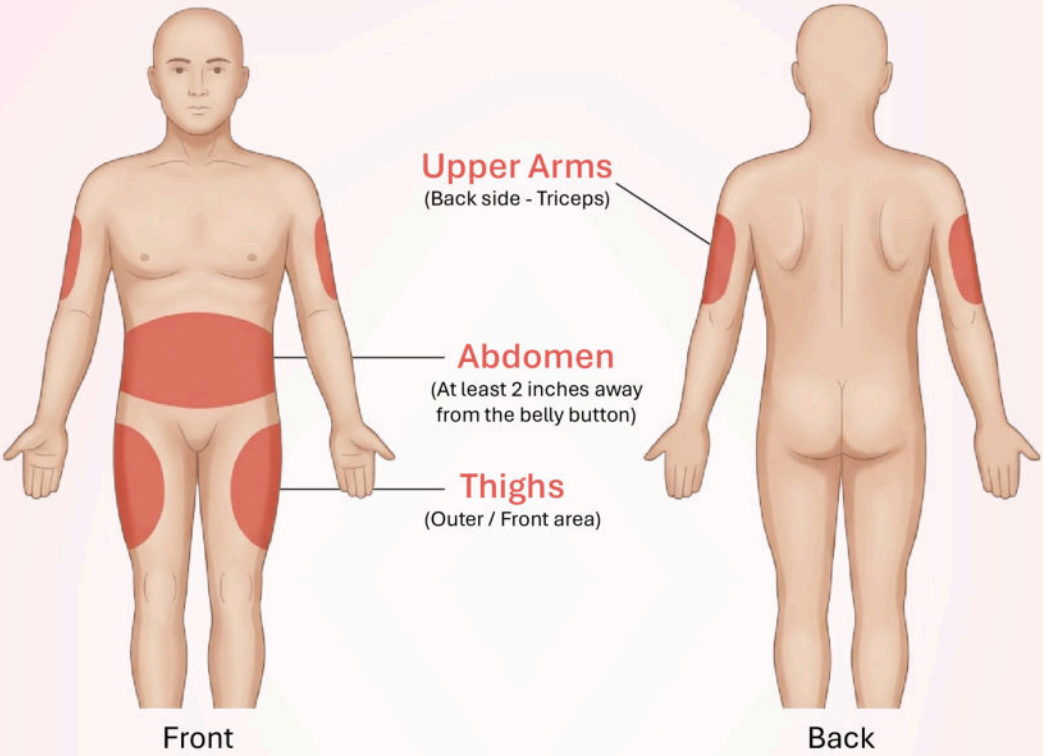

Step (4) : Inject the Dose

1. Push the pen (needle cover sleeve) against the skin & keep applying pressure.
2. Listen for click sound during the injection & hold for approximately 10-15 seconds.
3. It is completely injected when the plunger rod entirely covers the pen window.
4. After using the injection, reattach the pen cap & dispose of the used pen.

Injection sites & Rotation Guide

Important Instructions For use

- Inject Tirvox under the skin (subcutaneously) of your abdomen, thigh, or upper arm.
- Change your injection site each time you take a dose to help prevent skin thickening, dents, or lumps.
- Do not inject into skin that is painful, bruised, scaly, hard, scarred, or damaged.
- After the injection, gently press the injection site if needed.
- Do not rub the area.

What is Diabetes Mellitus (DM)?

Diabetes is a long-term condition where the body does not make enough insulin or cannot use it properly. This causes high blood sugar, which over time can damage the nerves, blood vessels, and other organs.

What is Obesity?

An abnormal or excessive fat accumulation that presents a health risk.

What is BMI?

Body mass index (BMI) is a tool that uses your height and weight to estimate your body fat. It can help identify your risk for certain health conditions, like heart disease.

	BMI (kg/m2)	Obesity Class
Underweight	<18.5	
Normal	18.5 to 24	
Overweight	25 to 29	
Obesity	30 to 34	I
	35 to 39	II
Extreme Obesity	≥40	III

What is Obstructive Sleep Apnea (OSA)?

A condition in which the airways become fully or partially blocked during sleep, leading to impaired oxygen levels & poor sleep.

Management of Diabetes & Obesity

Role of Exercise

- Start gradually with an exercise plan that is suitable for your lifestyle (consult your physician).
- Brisk walking is usually appropriate for most diabetics.
- 90 to 120 steps per minute.
- Build up to 20 to 30 minutes of brisk walking every day of week (optimum).
